Reflection

We do the project "Who are we". We do a podcast, we choose coding as the community. We wanted to talk about it because it connects to our interests, our goals and the way to think. For me, coding is not just a technical skill, but also a way to solve problems, expressing ideas, and understand the modern world, such as AI. I think being human means learning, adapting and creating, and coding reflects all of these things.

One of the questions is what has shaped our community. I think the coding community has been shaped by technology, education, online collaboration. As the technology becomes a bigger part of daily life, coding has become more important in areas such as business, robotics, games, AI, and finance. Education has also helped shape this community because more schools and online platforms now teach programming, like Khan Academy. In addition, communities like GitHub have made coding more open and collaborative. On GitHub, people can share projects, learn from others, fix bugs together, and improve code as a group. In our podcast, we talked about how coding can help people build tools, improve logical thinking, and prepare for future careers, showing that coding is not only about computers, but also about people who can work together to make life more efficient and creative.

The pocast also made me think how communities shape the world around us.the coding community has a huge influence on society because so much of modern life depends on websites and digital system.coding affects how people community work and solve problems.because of that being part of this community means contributing to changes in the real world.

I used several ATL skills during this project.I used communication skills when working with my group members and helping organize ideas into a podcast format.I used thing skills especially critical and creative thinking,when deciding what coding means to us personally and how to explain it clearly to listeners.

We choose a podcast because it felt more natural than writing an essay.It allows different voices and ideas to come together,especially matches the community.
